

pi0.5 — DuQuant SVD vs SVD-Hadamard (A2-lite) — int4-utilization heatmap
 Color = % of values 'lost' (rounded to int4 level 0) per tile, after per-block MSE-optimal scaling.
 Dark stripes = outlier blocks throwing away most int4 levels; uniform yellow = bits well-spent.

raw (no rotation)

DuQuant SVD

SVD-Hadamard (A2-lite)

paligemma.L14.down_proj — pathology (X channel-skew 156×; pure-SVD HURTS nMSE 3×, SVD-H partial recovery)

paligemma.L02.gate_proj — typical MLP layer (SVD-only leaves amax-ratio 12.6×, SVD-H flattens to 5.2×)
